

UNC Asheville Wireless Guide

Get Connected

Students, Faculty, and Staff

Secure, encrypted wireless access is provided via the eduroam network. [View the instructions below](#) to connect your devices.

Legacy devices and gaming consoles may register for [alternative access via the UNCA_PSK network](#).

Campus Guests

View our Terms of Service and this week's guest wireless password. Connect your device to **UNCA_Guest** and enter the weekly password.

[Guest Wireless Access Details](#)

eduroam

eduroam is the preferred wireless network on the UNC Asheville campus for students, faculty, staff, volunteers and visitors from **eduroam** partner organizations.

Quick Start

1. Connect to the **UNCA_Setup** network
2. Use a web browser to visit <https://wifi.unca.edu>
3. Follow the on-screen configuration wizard to connect

UNCA_PSK (Alternative Access)

UNCA_PSK is the alternative access wireless network on the UNC Asheville campus, created for older devices that do not support the advanced security features required to connect to **eduroam**.

For devices that do not support advanced network encryption – such as older computers and gaming consoles – the UNCA_PSK network provides less secure, lower-priority connectivity.

Connecting to the UNCA_PSK network requires registration of your device's MAC Address. You will need to obtain the MAC Address before beginning the setup process to receive access.

- [How to Find Your MAC Address](#)

The UNCA_PSK network should only be used if your device does not support secure EAP-TLS connections, or does not have a web browser capable of completing the enrollment process.
